

INVISA-VIEW

KEY FEATURES

The Invisa-view features a 65/35 perforation pattern, meaning 65% of the film is retained and 35% is removed. This pattern offers more print surface area for enhanced image resolution and color reproduction while retaining the films one way visibility. It is ideal when image quality has priority over the view.

*Note that Invisa-view is not usable for vehicle graphics because of the film's reduced visibility.

Also available as:

- **Laminated Invisa-view:** For added protection from UV rays and water, we apply an optically clear laminate. This allows not only protection from the elements, but gives the graphic added longevity.
